

# ThermiSmooth Face

## Facial Rejuvenation Without Botox or Fillers

The Center for Functional Medicine is excited to announce a new service called **ThermiSmooth Face**, designed to help our patients, both men and women, address the changes in their skin that are associated with the aging process without the complications affiliated with botox, fillers, and surgery.

### What is ThermiSmooth Face?

**ThermiSmooth Face** is a non-invasive treatment used to reduce wrinkles, fine lines and effectively rejuvenate the skin. It is performed on the forehead, eyes, cheeks, chin, and neck to smooth and tighten the skin. **ThermiSmooth Face** utilizes a gentle heating mechanism using temperature-controlled radiofrequency (RF) energy to stimulate **immediate natural collagen production and activation** in the dermis and long-term production of new collagen. Additional benefits of this safe, non-toxic and non-surgical treatment include:

- Instant results
- Lasting results
- No downtime
- Non-invasive

## How do I know if I would benefit from ThermiSmooth Face?

- Do you experience upper and lower eyelid laxity and lines?
- Do you experience dry eyes?
- Do you experience lines on the forehead or between the eyebrows?
- Do you experience laxity of the jowl and neck?
- Do you have scars from acne?
- Do you have frown/laugh lines around the mouth?
- Do you experience fine lines or laxity in the chin area?

## What is Radiofrequency (RF) and how does it work?

Radiofrequency is a type of electrical energy that can be individually controlled and delivered very accurately. RF technology has been used in medicine extensively, including treatments that address the heart, pain management, and autoimmune dry eye disease (Sjögren's syndrome). With **ThermiSmooth Face**, the provider uses a **specially designed thermistor-regulated handpiece** to target and treat the desired areas of the face **precisely and safely**. During the procedure, you will feel warmth and heat but no pain.

## What you can expect:

- No surgery
- No anesthesia
- No downtime
- Comfortable, in-office treatments
- Four 30–45 minute sessions, 1–3 weeks apart
- You may resume regular activity the same day of the procedure
- Noticeable improvement after the first session
- Long lasting results

## Do I need to do anything special before the treatment?

Makeup, including lotion, eyeliner and eyeshadow should be removed from the face before treatment. We also **strongly recommend** that patients **hydrate** well prior to treatment (half your body weight in ounces).
